Additional tools and features

When using Peppol-compliant transactions, you will be able to use some additional tools that are available in the tools page. These tools will again help you improve your workflow during the day.

The additional tools that are available once you have introduced Peppol-compliant documents to your system are:

- Document comparison
- SEPA XML file creation

Document comparison

This tool will allow you to compare to documents, item-by-item, and will visualize you the differences between both items.

For more information, please go to the following section where you can find a more in-depth guide on how to use this tool.

File exportation

Once you have various validations released in your system that are Peppol-compliant, you will be able to generate various exportations related to these validations.

For more information on how to export documents, please see the following section.
